Multimedia (Fall 2017, Sejong University)
Prof. S. M. Riazul Islam

Extension Assignment (EA) 2

Please prepare a report on the topic mentioned below.

Multimedia Data Compression Techniques and Their Applications

Last Date for Submission: December 12, 2017 (Tuesday)

Guidelines/Requirements:

1. The report should contain motivation and findings in an appropriate manner.
2. The report should be prepared in the form of PowerPoint slides (PPT or PPTX format).
3. The recommended number of slides is 20 to 30. Each slide should contain some meaningful information. The entire report should have a good sequence.
4. The report should be concise and informative in nature. At the same time, that should be self-explanatory as much as possible.
5. Try to avoid mathematical equations as much as possible. However, the key equations to explain the relevant thoughts and ideas are obviously required.
6. Do not provide any mathematical derivation or proof. Just use the results if that is required.
7. It is highly recommended to mention the source references in the report (maximum number of references is 10).
8. The figures (if any) should be nice and relevant and possibly with a brief description and explanation. Do not include any vague and/or irrelevant picture/diagram/image.
9. The overall presentation quality should be nice.
10. In sum, the report itself should have some value in terms of both quality and presentation!

Note: please do not copy from other sources. Your report should be completely different from others in principle.

Instructions:

1. You should upload this EA in Sejong University Blackboard after you log-in with your ID
2. Only a single PPT or PPTX file should be uploaded
3. The assignment should have a cover page (called title slide) where you should mention the title of the assignment, student's name, and student number, and other relevant information as you design.
